

Smoke Alarm Safety

01

Working smoke alarms give you early warning when every second matters.

FIRE SAFETY TIPS

- 1 Install smoke alarms inside every bedroom, outside each sleeping area, and on every level of the home, including the basement.
- 2 Use interconnected alarms when possible so that when one alarm sounds, they all sound.
- 3 Test every smoke alarm at least once a month using the test button.
- 4 Replace the entire smoke alarm when it is 10 years old, or sooner if the manufacturer directs.
- 5 Never remove a battery because of cooking smoke. Use the hush button, ventilate the area, or move the alarm farther from the cooking appliance if allowed by the manufacturer.

REMEMBER

A smoke alarm with a dead or missing battery cannot protect your family.
